Getting Started with Photoshop CS5 I'm sure you've heard about the changes in Photoshop CS5, but there are many new features, improvements, and user-friendly enhancements that are sure to help make your Photoshop experience better. Table of Contents Highlights of CS5 The major highlight in Photoshop CS5, next to professional-level features, is the seamless integration with Adobe Creative Suite CS5. This lets you combine multiple design elements and elements from other programs into one project, instead of having to open them all in Photoshop, and then open them again in the correct proportions. The interface has also been considerably streamlined, and now features a slide-out toolbox window for better tool visibility. Even the tools are now seamless, meaning that you don't have to stretch the icons across multiple displays. Object-based adjustment tools are now even more customizable in CS5, giving you a greater degree of control over your image adjustments. A new Content-Aware feature enables you to see the actual content of an image as you change the color, tone, or other attributes. It also enables you to take advantage of Adobe's Content-Aware Fill tools, which automatically corrects color and tone or textures in the surrounding area, making it easier for you to make large, accurate adjustments to difficult-to-view areas of an image. Also new to CS5 is the ability to create your own artwork. No longer are you limited to a preset library of symbols and art elements. Now you can design your own brushes, pens, and other objects for use within Photoshop. Adobe is continuously working to make Photoshop better, more helpful, and easier to use for professionals and beginners. Learning Photoshop CS5 If you are new to Photoshop, or need to improve on your existing skills, then Photoshop CS5 is a perfect place to start. use the UIAlertView when I press the next button I want to use the UIAlertView when I press
the next button. The problem is I don't know how to do it. The website shows the code as follow
and it also is described here. if (x == 2) { UIAlertView *alert = [[UIAlertView alloc]
initWithTitle:@"Success!" message:@"You are the winner of level 2!" delegate:self
cancelButtonTitle:@"OK" otherButtonTitles:nil, nil]; [alert show]; [alert release]; } I really don't
understand how it is working. I think that the code above is not enough to display the alert box.
Can anyone help me with this problem? A: You have to define a delegate (which your class will
implement) and then add the alert view to it. @interface MyClass : NSObject @end
@implementation MyClass - (void) alertView:(UIAlertView *)alertView
clickedButtonAtIndex:(NSInteger)buttonIndex { // do something } @end Then to add an alert
view to your interface, you do something like: UIAlertView *alert = [[UIAlertView alloc]
initWithTitle:@"Success!" message:@"You are the winner of level 2!" delegate:self
cancelButtonTitle:@"OK" otherButtonTitles:nil, nil]; New Delhi: An Israeli diplomat's visit to

1. Field of the Invention The present invention relates to an optical disk recording system, a method of controlling the optical disk recording system, and an optical disk recording method. 2. Description of the Related Art It is known that in apparatuses for recording information onto optical disks, data exchange between the respective units of the apparatus is performed by using an optical disk recording apparatus. As this type of apparatus, an optical disk recording apparatus is proposed in which a master disk used to record data onto a high-density optical disk, such as an MD or the like, is automatically exchanged with a floppy disk having a same format with the master disk, the data recording in this case being performed by the floppy disk. The floppy disk, in this case, is called a slave disk, while the master disk is called a master disk. Also, there is proposed an apparatus for recording information onto a multi-layered optical disk that has a plurality of layers and is obtained by dividing a single layer optical disk, by performing recording on the individual layers. In such an apparatus, the plurality of layers can each be used as a master disk or a slave disk. In this case, the layer that is used as a master disk is called a master layer, and the layers that are used as slave disks are called slave layers. In a multi-layer optical disk recording apparatus, in order to prevent transfer of data between the master layer

and slave layers, an identification signal (a layer designation signal) which is representative of the layer used as a master disk is recorded on the master disk, and a detection signal which represents the transfer of data from the master disk to the slave disks is recorded on the slave disks. In the case of a single-layered optical disk recording apparatus, no identification signal is recorded on the master disk. Furthermore, the slave disk is formed by using a disk that is made by dividing the layer of the master disk. When the slave disk is divided from the master disk, the recording area of the master disk will be used as the slave disk. Therefore, in the case of a multi-layer optical disk recording apparatus, a master disk is formed by a plurality of layers, and a single slave disk is formed by part of the master disk. As a result, a plurality of slave disks are recorded simultaneously on the slave layer of the master disk. The size of each slave disk is substantially the same as the area of the slave layer. The above-described conventional art, therefore,
