Keymacro is a windows-based software for midi keyboard and computer input devices. It is a must for anyone involved in music production. In keymacro you can configure any number of your midi instruments to any number of the keyboard keys. It can be very useful for the creation of solo music and music for bands. You can assign each of the keys of the keyboard to the instrument, or you can assign all the instrument to one key, and then it will be played with the second keyboard. The logic that defines the relationship between the instrument and the key is included in the software. In this version we have included two new functions: the move function and the mute function. These two functions can be used to move or mute the sounds of a musical instrument without changing its position. This is a very useful feature when programming for solo performances.
