B-12 is a third-person action-platformer with randomized levels and relentless robots with plasma cannons for hands. It is inspired primarily by Mega Man X and modern rogue-lite shooters, although the mechanics differ somewhat from both of those. While various weapons and gear can be equipped, the style and depth of the game lean toward arcade minimalism rather than full-on RPG complexity. B-12 is geared toward speed-runners and those who like to play in short sessions. The mechanics are simple. Find and activate three switches in each of the 12 levels to power up the next teleporter. There are four groups of three levels with each group introducing a newer and more powerful generation of Brantisky robots. Can you make it to the final challenge and defeat 'evil' B-12?
